

# Association of Batai Virus Infection and Encephalitis in Harbor Seals, Germany, 2016

## Technical Appendix

**Technical Appendix Figure.** Fluorescent in situ hybridization (FISH) of kidney cells from harbor seal infected with Batai virus, Germany, 2016. A) Cells within glomeruli and tubular epithelial cells showing a mild pink, intracytoplasmic BATV-specific result detected by FISH. Inset: Higher magnification view (fast red stain). B) Kidney tissue used as negative control (incubation without probe). Scale bars indicate 20  $\mu\text{m}$ .
